Messenger: One-To-One Web-Based Realtime Chat App

- ▶ Process: Six tickets in one sprint

Messenger: One-To-One Web-Based Realtime Chat App

- ▶ Process: Six tickets in one sprint

- ▶ Teck Stack

2.1.1 JWT: Local Storage —> Cookies

Cookies — localhost		Name	Value	Domain	Path	Expires	Size	Secure	HttpOnly	SameSite
Local Storage — localhost		messenger-token	eyJhbGciOiJIUzI1Ni...	localhost	/	7/5/2021, 9:34:51 PM	152 B		✓	—

▶ Process

- ▶ Clean localStorage related logic in client-side
- ▶ Set attributes for cookies in server-side: httpOnly && maxAge
- ▶ Benefit: Mitigate cross-site scripting (XSS) attacks

▶ Caution

- ▶ Consider all states (E.g. login/register/logout)
- ▶ Units may differ (E.g. expiresIn: 86400 !== maxAge: 86400)

2.1.2 Components: Class → Functional

- ▶ Main Changes in Home/Search/Input/Chat
 - ▶ `this.state` → `useState()`
 - ▶ `componentDidMount()+componentDidUpdate()` → `useEffect()`
- ▶ Benefit
 - ▶ A easier life without 'this'
 - ▶ No more lifecycle-based split but logic-based
- ▶ Caution: Original code may have bugs (E.g. `isLoggedIn`)

Issue: Sending Messages

- ▶ Display sent messages in real time
- ▶ Correct order of messages on page load
- ▶ Three Attempts to Improve Security
 - ▶ Only include existing conversations in search results
 - ▶ Not render FilledInput if the conversation is not between current user and others
 - ▶ Check if the conversation belongs to the sender before posting

Issue: Sending Messages

- ▶ Display sent messages in real time
- ▶ Correct order of messages on page load
- ▶ Three Attempts to Improve Security
 - ~~▶ Only include existing conversations in search results~~
 - ▶ Not render FilledInput if the conversation is not between current user and others
 - ▶ Check if the conversation belongs to the sender before posting

Issue: Sending Messages

- ▶ Display sent messages in real time
- ▶ Correct order of messages on page load
- ▶ Three Attempts to Improve Security
 - ~~▶ Only include existing conversations in search results~~
 - ~~▶ Not render FilledInput if the conversation is not between current user and others~~
 - ▶ Check if the conversation belongs to the sender before posting

2.3.1 Read Status

▶ Process

- ▶ Add a readStatus column for messages in database
- ▶ Define the action 'read' and handle this event both in client-side and server-side
- ▶ Count the unread messages and adjust UI for notifications
- ▶ Put an avatar under the last read message as a read receipt

▶ Caution

- ▶ Efficiency is important especially when a loop is related to render (E.g. Find the last read message)
- ▶ Review existing knowledge if necessary (E.g. Three types of copy)

2.3.2 Sockets

- ▶ Improvement
 - ▶ Allow only authenticated users connecting to socket
 - ▶ Introduce room to secure conversations
 - ▶ Avoid duplicate conversations when receiving messages while searching it
 - ▶ Support concurrent display on multiple logins
- ▶ Caution: Try to have long-term consideration (E.g. Grab exact the needed cookie)

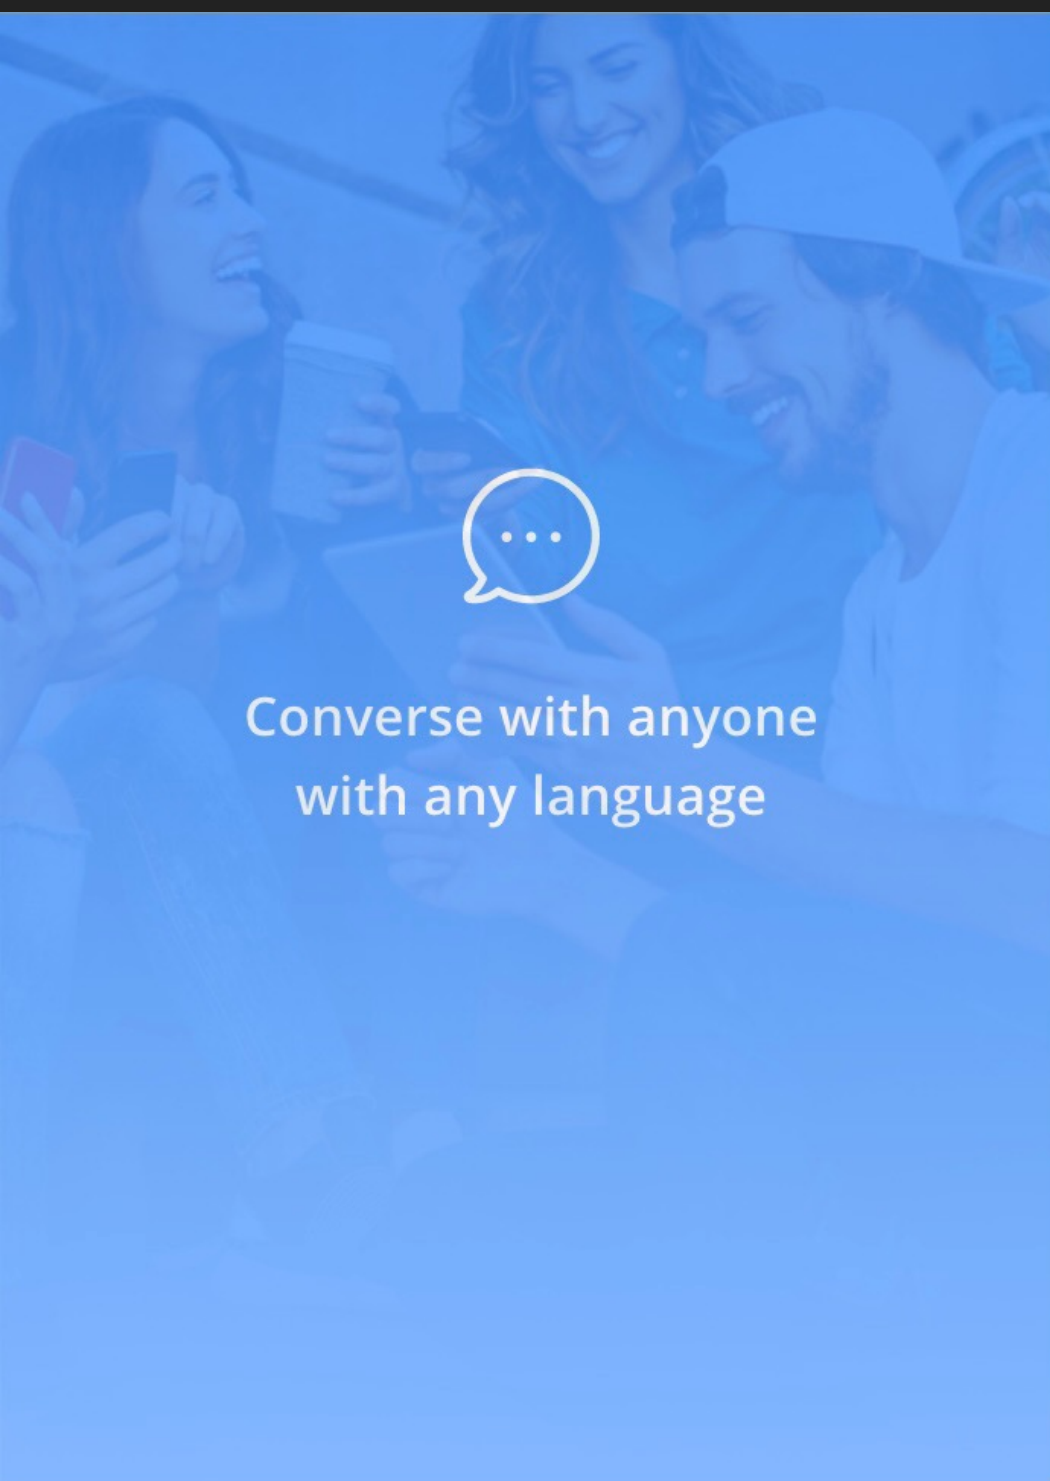

2.3.2 Sockets

- ▶ Two Challenges
 - ▶ Pretty new to Socket.IO
 - ▶ Solution
 - ▶ Conceptual: Docs & Tutorial
 - ▶ Practical: Follow the code flow & console.log()
 - ▶ Specific: Stack Overflow & Github Issues
 - ▶ Unexpected bugs when integrating and extend the read status feature
 - ▶ Solution
 - ▶ Change the way of counting unread messages
 - ▶ Add the deCount indicator to distinguish reader and sender

2.3 IMPLEMENTATION OF NEW FEATURES

2.3.3 New Design for Login/Signup Pages

Recipe: Landing = Banner + Switcher + Login/Signup Form
